FinePrint Server Edition is a comprehensive printing assistant that allows you to connect to remote drivers, from across a local network and schedule printing jobs. The software also

offers an advanced preview of the file you wish to print, allowing you to rotate, duplicate the content or select the desired pages. Easily create remote printer configurations. With FinePrint Server Edition, you can easily print a document even if the designated driver is not connected to your workstation.

However, it can simply be connected to another machine or to the server, with the local network, in order for you to access it. The software also offers a preview of the file you wish to print. It supports multiple types of image files, text or spreadsheets and

allows you to customize their content before printing them. For instance in case of an image, you can print it as a full page or duplicate it and print more copies onto a single page. You may add borders, stamps or watermarks on the surface of the file. Preview and edit files Before you send the file to be printed, you may select whether the physical document should be double-sided, or if you only wish to print specific pages from the input file. Additionally, the software enables you to create multiple printer configurations, by adding several

drivers. The printing hardware can be copying machines, regular printers, even fax machines. Moreover, you may enable automatic procedures for page flipping, printing the pages in reverse order or ignoring blank pages. You may add text to the files set for printing, remove certain areas or add preset watermark messages. Reliable application for file printing With FinePrint Server Edition, you can easily create printing jobs, by sending the files to local or remote printers. The software allows you to preview the files before printing

them, to add borders

Q:
Raphael nested set of nested sets I am trying to create a nested set of nested sets in Raphael. I am using nested sets to display a tree (hence the nested sets). In each tree item I have: a text string to describe the item and its parent an image to represent it. (this is where I need your help. Ideally, I need a nested set

of nested sets that creates one image per top level for each item in the tree
